

# SENSE HAT SENSORS

## Test the Sense HAT

- 1 Open Python 3 and enter the following commands directly into the shell:

(do not type the chevrons >>>)

```
>>> from sense_hat import SenseHat
>>> sense = SenseHat()
>>> sense.show_message("Hello world")
```

Press Enter after each line, and after the third line, the message should appear on the Sense HAT's display.

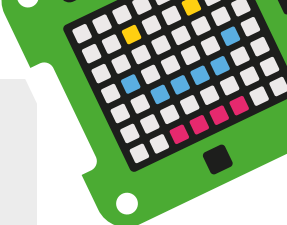

- 2 Now try retrieving the sensor values:

```
>>> sense.temperature
>>> sense.humidity
>>> sense.pressure
```

When you press Enter, you will see the sensor's value.

## Pixel art

- 1 Open a new window and type:

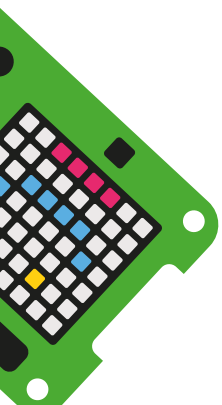

```
from sense_hat import SenseHat
from time import sleep
```

```
sense = SenseHat()
```

```
r = (255, 0, 0)
g = (0, 255, 0)
b = (0, 0, 255)
y = (255, 255, 0)
p = (255, 0, 255)
c = (0, 255, 255)
w = (255, 255, 255)
e = (0, 0, 0)
```

```
icon = [
    e, e, e, e, e, e, e, e,
    e, e, e, e, e, e, e, e,
    e, e, b, e, e, b, e, e,
    e, e, e, e, e, e, e, e,
    e, e, e, e, e, e, e, e,
    e, b, e, e, e, e, b, e,
    e, b, b, b, b, b, b, e,
    e, e, e, e, e, e, e, e,
]
```

```
sense.set_pixels(icon)
```

- 2 Now make your own icon using the colours (r is red, g is green, b is blue, and so on). Your icon must be 8x8 like the example.
  - 3 Run the code with F5 and you should see your icon on the Sense HAT display.
- 

## Make it Hot

- 1 Replace the last line:

```
start_temperature = sense.temperature

while True:
    print(sense.temperature)
    if sense.temperature < start_temperature + 0.5:
        sense.set_pixels(icon)
    else:
        sense.clear()
    sleep(1)
```

- 2 Run the code again. Now breathe on the Sense HAT and see if you can make it smile!
